

SANKALPA

Hindu Mythos Manifestation & Action Architecture

Product Architecture

Version 1.0 • Comprehensive Specification

Executive Concept: *Sankalpa* bridges ancient Vedic philosophy with modern behavioral science. Unlike standard law-of-attraction tools, Sankalpa anchors manifestation in three pillars: **Intention (Sankalpa)**, **Conscious Effort (Karma)**, and **Universal Alignment (Dharma & Panchang)**.

1. PURUSHARTHA INTENTION ENGINE

Every desire and goal is categorized under the four classical human aims (Purusharthas) to ensure life balance and holistic spiritual and material growth.

Dharma (Ethics & Purpose)

Focuses on duty, skill mastery, leadership, personal integrity, and spiritual alignment.

Artha (Wealth & Prosperity)

Financial independence, career progression, physical security, and value creation.

Kama (Love & Joy)

Cultivating healthy relationships, creative expression, emotional vitality, and art.

Moksha (Liberation & Peace)

Mindfulness, stress reduction, detachment from outcome, and inner freedom.

2. KARMA TRACKER (ACTION & ENERGY ENGINE)

Manifestation without action is incomplete. The Karma Tracker converts abstract Sankalpas into daily micro-habits categorized by the three **Gunas** (qualities of nature).

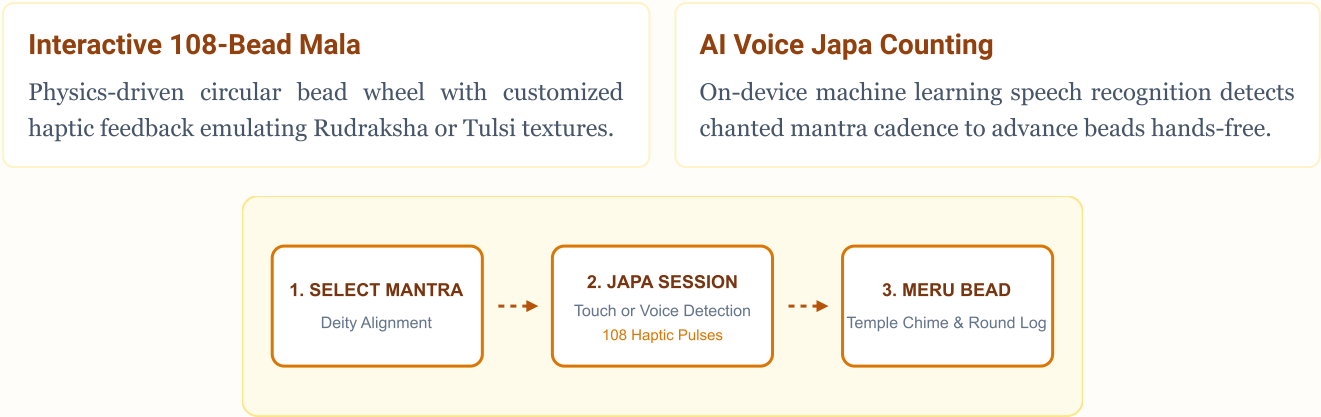

Guna Energy	Behavioral Focus	System Impact
SATTVIC	Meditation, study, clean nutrition, service	Increases clarity, builds inner stability, restores energy
RAJASIC	Deep work, workouts, sales calls, creation	Drives material output, goal progress, and momentum
TAMASIC	Procrastination, doomscrolling, inertia	Tracked for conscious reduction and burnout prevention

Key Feature Mechanics: Nishkama Karma Engine

- Outcome Detachment Prompts:** Inspired by the Bhagavad Gita, users reflect nightly on executing actions without anxiety over external validation.
- Burnout Alert:** Triggers if daily action logs are >80% Rajasic without Sattvic balance, suggesting restorative practices like Yoga Nidra.

3. MANTRA & DIGITAL JAPA COUNTER ENGINE

Leverages sacred sound frequency (Nada Yoga) to condition the subconscious mind. The digital Japa Mala provides a tactile, sensory-rich meditation experience.

4. ARCHETYPE & DIVINE GUIDANCE ENGINE

Channels divine mythos energies as psychological archetypes to help users cultivate specific mindsets for goal achievement.

Archetype	Manifestation Domain	Core Practice & Mantra
Ganesha	Removing obstacles, new projects	Om Gam Ganapataye Namaha
Lakshmi	Abundance, career wealth, value creation	Om Shreem Mahalakshmiyei Namaha
Saraswati	Wisdom, innovation, communication	Om Aim Saraswatyai Namaha
Hanuman	Willpower, physical health, discipline	Om Hanumate Namaha
Shiva	Mastery, habits overhaul, letting go	Om Namah Shivaya

5. PANCHANG (COSMIC TIMING) INTEGRATION

Harmonizes modern actions with natural lunar and solar cycles, encouraging users to set or conclude initiatives based on optimal cosmic windows.

Shukla Paksha (Waxing Moon)

Ideal phase for setting new Sankalpas, starting projects, launching initiatives, and expanding habits.

Krishna Paksha (Waning Moon)

Focuses on introspection, completing open tasks, breaking unwanted habits, and spiritual release.

6. MYTHIC GAMIFICATION & PROGRESS SYSTEM

Progression is measured through spiritual growth rather than superficial points. Completing daily Karmas constructs sacred geometric patterns.

- Yantra Unlocks:** Completing streaks constructs intricate SVG Yantras (e.g., Sri Yantra), unlocking deeper mythological lessons and philosophy snippets.
- Karmic Wheel Visualizer:** Dynamic home dashboard that expands concentric rings as daily Sattvic and Rajasic habits are fulfilled.
- Svadyaya Journaling:** Nightly reflection logs unlock historic insights from the Upanishads and Mahabharata related to personal resilience.

7. TECHNICAL & SECURITY ARCHITECTURE

Privacy-First Design: User Sankalpas (desires and personal goals) are encrypted on-device. Audio processed during Voice Japa is analyzed locally without streaming data to cloud servers.

Layer	Technology Recommendation
Frontend / App Engine	Flutter / React Native (Cross-platform iOS & Android)
Haptics & Audio	Custom Native Haptic Engine + CoreAudio / Android AudioTrack
Voice Detection	On-device TensorFlow Lite / CoreML custom keyword model
Cosmic Calculations	Swiss Ephemeris SDK for precise Panchang & Tithi generation
